

AYOBAMI OLOWOLERU

BACKEND & DEVOPS ENGINEER

+234 703 351 7584 | olowolero06@gmail.com | linkedin.com/in/ayo-olowolero-a8ab7418a | github.com/Roy6lty | roy6lty.github.io

PROFESSIONAL SUMMARY

Backend and DevOps Engineer with 5 years of experience building, deploying, and operating cloud-native applications. Strong in Python, Go, REST APIs, PostgreSQL, Docker, Kubernetes, AWS, CI/CD, observability, and AI-powered backend systems. Delivered production platforms across healthcare, inventory, education, media, and event technology; led engineering teams, improved deployment speed and test coverage, and implemented monitoring and operational controls for reliable releases.

CORE SKILLS

Backend Engineering: Python, Go, TypeScript, FastAPI, Django, Gin, Express.js, REST APIs, Celery, Redis, webhooks, distributed systems

Cloud & DevOps: AWS, Docker, Kubernetes, GitHub Actions, CI/CD, Linux, Bash, container orchestration, deployment automation

Reliability & Observability: Prometheus, Grafana, dashboards, alerting, health checks, uptime monitoring, performance analysis, incident troubleshooting

Data, AI & Payments: PostgreSQL, MongoDB, DynamoDB, vector databases, RAG/LLM integration, ETL, Stripe, Paystack, Wise

PROFESSIONAL EXPERIENCE

Herts Technologies | Apr 2024 - Present

Backend Engineer — *PAMS Inventory Management Platform (Remote)*

- Designed a configurable backend architecture with role-based access control to support multiple user groups and changing business data requirements.
- Reduced deployment time by 25% by implementing GitHub Actions pipelines and self-hosted runners for repeatable application releases.
- Implemented Prometheus metrics, Grafana dashboards, anomaly alerts, and operational monitoring for application and infrastructure performance.
- Built an ETL pipeline and PostgreSQL queries, triggers, and views that transformed operational data into analysis-ready information.
- Created API and architecture documentation that improved integration and maintenance across engineering teams.

Environment: Python, FastAPI, PostgreSQL, Redis, Celery, GitHub Actions, Prometheus, Grafana

Kwam2 Enterprises | Sep 2025 - Jun 2026

Backend Engineer / Technical Lead — *Event Management and Ticketing Platform (Contract)*

- Led a team of four developers, planned sprints, reviewed technical designs, and coordinated delivery of backend features.
- Designed and built a ticketing engine that enabled organizers to publish events and users to purchase tickets in real time.
- Integrated Stripe and Wise for payment processing, revenue transfers, and reliable post-payment workflows.
- Built social graph features and standardized event and user-activity models to support recommendations and analytics.
- Produced system design and architecture documentation to improve maintainability and engineering alignment.

Environment: Go, Gin, PostgreSQL, Redis, Docker, Stripe, Wise

Exam Companion | Feb 2025 - Sep 2025

Backend, AI & DevOps Engineer / Team Lead — *AI Learning Platform (Contract)* | examcompanion.com

- Led the engineering delivery of an AI study platform that ingests learning materials and generates summaries, flashcards, and contextual explanations.
- Implemented the AI and retrieval layer using a vector database so chat responses remained grounded in each user's uploaded material.
- Designed context and progression workflows that preserved continuity across study sessions and improved the learning experience.
- Integrated Stripe and Paystack for subscription and payment workflows.
- Deployed and operated application components on AWS with Kubernetes, including service configuration, health checks, rolling updates, scaling, and availability monitoring.
- Added monitoring and performance visibility to identify application and infrastructure issues and support reliable releases.

Environment: Python, LLM APIs, Vector Database, PostgreSQL, AWS, Docker, Kubernetes, Stripe, Paystack, Prometheus, Grafana

Photo Editing and Sharing Application | Dec 2024 - Mar 2025

Backend Engineer — *Contract*

- Built and documented backend APIs for a photo editing and sharing platform using Go and Gin.
- Migrated media blobs from PostgreSQL to Amazon S3, reducing database size by 40% and improving query performance.
- Containerized the application and standardized Docker builds across development and deployment environments.
- Integrated Stripe payments and webhooks for secure and consistent post-payment operations.
- Achieved 80% unit-test coverage, reducing regression risk and improving release confidence.

Environment: Go, Gin, PostgreSQL, AWS S3, Docker, Stripe

Herts Technologies | Oct 2022 - Jun 2024

Backend Engineer — *Pillar Medical EMR Platform (Remote)*

- Documented inter-process communication and service workflows, improving troubleshooting and shared system understanding.
- Reduced deployment time by 40% by optimizing GitHub Actions pipelines and introducing automated preflight checks.
- Expanded automated test coverage across services to approximately 65-75%, improving regression detection and release reliability.
- Developed and documented backend APIs and asynchronous processing workflows for frontend and service integrations.

Environment: Python, FastAPI, PostgreSQL, Redis, Celery, GitHub Actions

SELECTED ENGINEERING PROJECT

Distributed Load Testing Platform | Independent Project

Backend & DevOps Project

- Built a distributed load-testing platform in which a controller coordinates concurrent test workers running as Kubernetes workloads.
- Used Docker and Kubernetes deployments, jobs, services, configuration, and resource controls to run repeatable and scalable tests.
- Instrumented throughput, latency, error rate, worker health, and cluster resource consumption with Prometheus and Grafana.
- Designed for horizontal scaling, worker isolation, centralized result collection, and automated build and deployment workflows.

Environment: Go/Python, Docker, Kubernetes, Prometheus, Grafana, GitHub Actions, Linux

EDUCATION

Federal University of Technology, Akure (FUTA)

Bachelor of Technology (Honours), Applied Geophysics | 2015 - 2021
